

STANDARD LEGS COMPATIBILITY

Adaptable to standard cylindrical bed legs :

- Maximum diameter : 7 cm
- Minimum height : 10 cm
- Maximum screw diameter : 10 mm (M10)

INSTRUCTIONS FOR USE

- To guarantee its effectiveness, the trap should be placed on all the legs of the bed
- Do not leave blankets and sheets in contact with the floor and keep the bed away from the wall
- In case of infestation, consult a pest control professional
- If you wish, you can add a little diatomaceous soil (natural insecticide) at the bottom of the reservoir

CLEANING

- Regularly check that there is no dust or debris in the gutter, which can reduce the trap's effectiveness
- Do not use abrasive materials or products to avoid damaging the textures, which are essential to the efficient operation of the trap
- If bed bugs are present, clean the reservoir in a basin of hot water at a minimum temperature of 55°

CHEMICAL-FREE

DETECTION & PROTECTION

BED BUGS TRAP

REUSABLE

RECYCLABLE

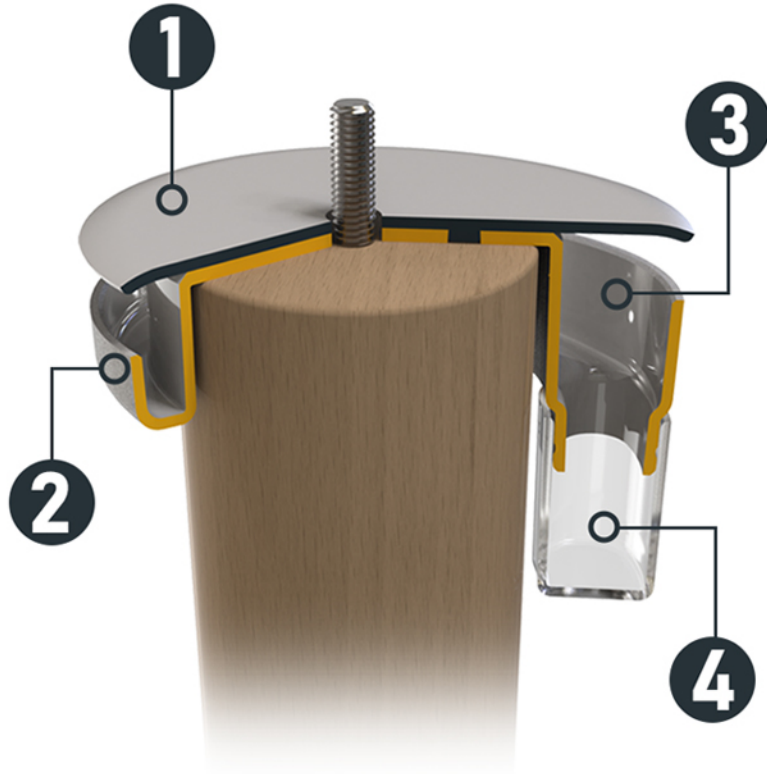

PATENTED

MADE IN FRANCE

OPERATION PRINCIPLE

With a fully mechanical operation, the principle works permanently and no chemicals are required.

- 1** Anti-dust cover to prevent bed sheet or quilt from slipping into the trap
- 2** Rough outer surface to allow bugs to climb up
- 3** Very slippery inner surface to prevent bugs from escaping
- 4** Removable transparent reservoir to detect bugs easily without removing bed leg

INSTALLATION

Quick and easy to install : just clip the cover and screw the leg, no tools required !

⚠ Align the cover and the gutter
